

### ONE LOCK QUICK-CHANGE SYSTEM

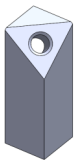

- Interchangeable holders convert the drum's spacing to 5mm/7.5mm/15mm to meet any milling, fine milling or micro milling specification
- The replaceable bit holders are not tapered, reducing the locking force and making the holders easy to change out
- Only one bit holder used throughout the drum, eliminating the need to stock multiple holders
- The only drum system on the market that is designed to last the life of the machine—No costly rebuilds required
- Custom tailor the drum's spacing to increase or decrease gradation of the milled material on a job to job basis
- Change bits faster with easy access to the bit from the back of the holder
