

WEDGE LOCK QUICK-CHANGE SYSTEM

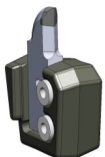

- Interchangeable blocks for different mining applications can convert a standard spaced drum into a rock drum without the costly expense of changing drums
- No tapered or threaded parts are welded to the drum providing a longer lasting block system. Industry standard taper systems wear and lose locking capability over time
- Continuous wrap design—Keystone’s patented block to block welding technology insures superior strength in the most extreme mining environments
- Easily change from standard mining bits to a radial mining bits
